

"I hope that your mouthpieces become a standard for the industry. In most evaluations I can contribute some observations...I have nothing to contribute to an already perfected product."

Ronald F. Becker

Director of the Underwater Institute
Southwest Texas State University

"You are absolutely correct that SeaCURE is the most comfortable mouthpiece available. Until I found your product, I had tried every other type of mouthpiece available, and they all left me with jaw fatigue after four or five dives in one day. Now, I am able to dive as much as I want without any discomfort at all."

David Meinke, Divemaster

Last Chance Divers, Ohio

The precision fit of SeaCURE places maximum effort at the back of the mouth (where it belongs), thereby providing superior comfort and security in all water conditions. The jaw joints are protected as jaw fatigue and gum irritation are completely eliminated.

BOTTOM LINE: No more headaches, no more jaw aches, no more distractions of dislodging.

The SeaCURE Custom Mouthpiece was designed and developed by Dr. Randall C. Moles, internationally noted orthodontist and expert in the diagnosis and treatment of jaw (TemporoMandibular - TM) dysfunction.

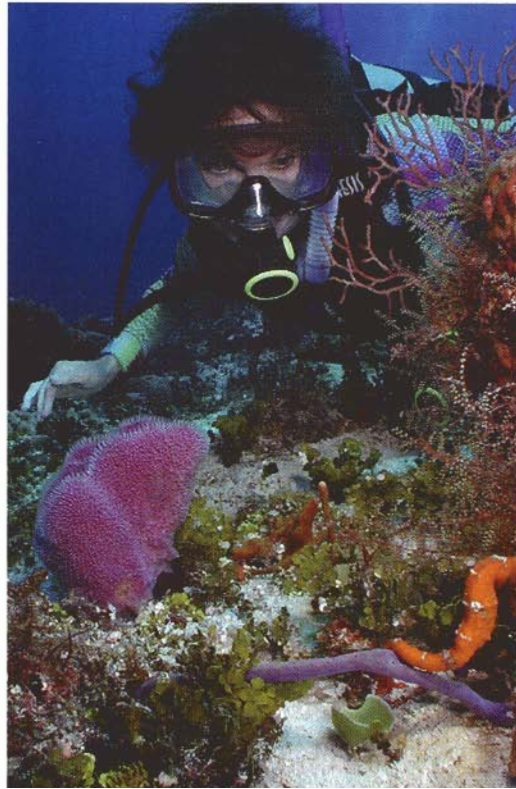

Dr. Moles is also an experienced SCUBA diver.

Security and Comfort

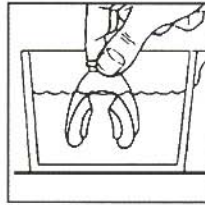

Now you can have
BOTH!

Very simply, SeaCURE is the most comfortable, most secure mouthpiece available. In fact, it is the only moldable SCUBA mouthpiece offset for BOTH the upper and the lower jaw positions.

SeaCure is the one and only mouthpiece that extends to the last tooth in the mouth, regardless of mouth size. Without any prefabricated, generic "tooth slots," SeaCURE is completely adjustable and re-moldable by you—the individual diver—for comfortable, extraordinary security.

What's in a name?

We at SeaCURE think you should know why our name defines our product so well.

Sea: The water of the sea gently flows to fit the space it is allowed. SeaCURE, the *original* custom mouthpiece, is designed with blended polymers, that once molded, flow to fit each of your individual teeth, no matter where they are positioned. SeaCURE is moldable, and re-moldable with no pre-placed tooth positions that could easily cause painful binding or product misfit.

CURE: Our original SCUBA mouthpiece is the cure for relieving jaw fatigue and headaches. SeaCURE allows the jaw to find a neutral rest position as determined by each diver's individual arc of closure.

Finding a mouthpiece that offers both unbeatable security and comfort has forever been the diver's dilemma. SeaCURE is the definitive answer.

The SeaCURE custom mouthpiece is a time-tested product. It has been used by hundreds of thousands of divers for over a decade on more than a million dives. In fact, members of military Special Forces use SeaCURE internationally.

SeaCURE is made to fit with incomparable comfort and security — GUARANTEED!

Because it is available in different sizes to fit various regulators and snorkels, the SeaCURE mouthpiece provides the utmost in stability of grip.

"Of all the DEMAs I've attended – this is the most innovative product by far.

I've never lost my SeaCURE mouthpiece even in the most severe surprise conditions with our sea creatures."

Jim Hart

Oceanographic Expeditions, LA
